

4.9.0 IMPORTANT UPDATES

Controller Communication Improvement

- Backdating any controllers to an older version of firmware must be done manually through the DC 4.8.2 (or higher) firmware update window - manual selection of firmware files is required

4.9.0 IMPROVEMENTS

Quick Quote Tool Improvements

- Added EasyTouch Glass Options
- Improved support for IC-II power supplies and enclosures
- Improved support for Equinox Lite
- Updated default style for keypads and ScenePoints to ETII
- Legacy products and objects are now removed

DMX DALI Gateway and Color Load Improvements

- Improved raise/lower function with CCT and HSIC load types
- Renamed operating modes to “DMX / DALI Output” and “DMX Monitoring”
- Updated the RGB-to-RGBW conversion to work with non-primary colors
- Removed “Color Channel” from color load type options

Design Center

- Improved Somfy SDN driver commissioning for groups & flexible connections to controller
- Updated Vantage Library including new KolorTune profiles and improved organization of folders
- Button Rings are now orderable for Easy Touch II in Ordering Wizard
- Added instructions for power profile calibration
- Added the ability to read memory card and controller files from InFusion Controllers with older firmware
- Added 2 new links to Vantage website via “Help” (“Vantage Controls Online”, “About InFusion Design Center”)
- Added show/hide options for Equinox Lite scene buttons
- Added “Line Feed” field option to RadioLink Keypad stations and “Line Feed” column for Load Schedule report

4.9.0 IMPROVEMENTS *(continued)*

Design Center *(continued)*

- Added “No Intensity Channel” field for RGB & RGBW type DimLoad-CCT loads
- Bill of Material reports now list items in alphabetical order
- Enclosure Report shows Enclosure 1 as IMPE
- All loads now display in commercial Schedule editor
- Decora station punches automatically add 3rd party adapter ring (VHB-0147) to Bill of Material reports
- Default keypad button names are now based on button position
- Improved Vacation Playback functionality
- Improved management of Voice site ownership
- Improved color management for “RGBW With Auto Learn” procedure
- Improved Equinox Lite emulators within Design Center
- Legacy products will now be found in the “Obsolete” Vantage Objects folder
- Updated the End User License Agreement for additional controllers that are added to a project
- Security and stability enhancements

IC-APP FIRMWARE

Version 4.9.0.2

- Improved program file compiling related to tunable profiles
- Security Improvements
- Once the firmware is updated to 4.9.0.2, it will NOT be possible to use an older version of Design Center to change the firmware. Backdating any controllers to an older version of firmware must be done manually through the DC 4.8.2 (or higher) firmware update window—manual selection of firmware files is required
